

World Childless Week 2019

Of the women who reached the age of 45 years in 2017, 18% were childless at the end of their childbearing years compared to 10% a generation before (Office for National Statistics). Whilst 10% are childless by choice, 10% are childless due to infertility and 80% childless due to circumstances (Keizer, R, 2010).

16-22 September 2019

World Childless Week is an online event for the childless not by choice community. It's aim is to offer support, raise awareness and break down barriers.
